Photo Therapeutics Product Line

Photo Therapeutics - Omnilux Clear-U

Product ID: 28250

While Supplies Last - receive a FREE Procyte Ti-Silc Sheer SPF 45 with purchase.

The healing power of light. Researchers have discovered that something as simple as light holds the key to clearing up problem skin. When skin is flooded with alternating blue and red light, the acne-causing bacteria self destruct and inflammation is decreased. Acne fades and the skin heals. Omnilux Clear-U has been clinically proven and FDA cleared for over-the-counter treatment of mild to moderate acne. This lightweight unit is easy to use and a safe, painless, and effective way to treat acne without damage to the skin. Just two 20 minute treatments per week for four weeks gives you healthier and clearer skin.

Retail Price: \$290.00

Our Price: \$225.00

Usage:

See product packaging for usage instructions.

Photo Therapeutics - Omnilux New-U

Product ID: 28251

While Supplies Last - receive a FREE Procyte Ti-Silc Sheer SPF 45 with purchase.

The science of rejuvenation. Cells in our body contain receptors that can absorb photons of light. This absorption stimulates a normal cellular process that otherwise occurs naturally within the cell. Light therapy accelerates this process, making the cell more efficient and increasing metabolism. Cells become more receptive and responsive to topical serums and skincare.

The red light of the Omnilux new-U stimulates cellular energy, and the production of collagen. The near-infrared light, invisible to the human eye, penetrates deeper and when used in combination with the red light it rejuvenates the skin.

Clinically proven and FDA cleared for over-the-counter treatment of crowsfeet. This lightweight, easy to use unit is safe, painless and effective. Only two 20 minute treatments per week for four weeks will reduce the appearance of crowsfeet.

Retail Price: \$290.00

Our Price: \$225.00

Usage:

See product packaging for usage instructions.

Omnilux New-U is not recommended for pregnant women. The safety of the treatment for pregnant women has not been tested and the risk is unknown.
